

Acupuncture can help people to avoid to do dialysis.

2/30/09

Dear Dr. Xia

Thank you for helping me with my various ailments.

After my several sessions with you my shortness of breath improved, my swollen legs have improved (less water content now) and best of all, my kidney function improved a lot (latest lab results showed a creatinine count of 1.57 after this was gone up to 2.17 a month ago).

I feel a lot better now but I will continue with my acupuncture sessions with you until I get fully well hopefully.

Again, thanks a lot.

R. Azarcon

When a creatinine over 2.00 should have Dialysis. But after Acupuncture creatinine down to 1.57. M.D said: dont need Dialysis.
